assist

- ^{all} the bullet points overleaf to
- I fully support reducing climate change.
 - I see education from crib to coffin as one of the most important factors in allowing climate change reduction to happen.
 - As a 'so called' developed nation - we have contributed more to growth of destruction of the climate and therefore should and must provide more leadership and financial support in rectifying the issues. Worldwide the indigenous cultures have through ^{2000s} ^{they} have of centuries in stewardship of the lands ⁱⁿ have been snubbed by those who extract and want more of earth's resources. The 'educated' need to listen to those who have tended the land for generations and preserved the balance of take and restore for ^{all} future generations.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. I respond with some feeling of guilt as previous generations and mine have contributed to the state we now find Planet Earth in. Therefore, I agree with all of the goals suggested by the Climate Change Commission. However, I have some reservation concerning the reference to reduction of sheep and cow numbers, and what effect that will have on the farming community and New Zealand economy. The huge tree planting programme will boost the output of CO₂. Housing in NZ has been of very recent days (March 22nd/23rd) allocated billions of dollars to increase output. This is a strain on materials e.g. timber, more trees to be processed. So, planting more trees makes sense. Some tougher penalties should be brought into law to eliminate the use of plastic by being replaced with degradable materials, and even rubbish thrown out on the roads, streams rivers and sea. Councils need more finance for a more rigorous sorting and disposals at their depots. Thank you for the opportunity to contribute to this submission.

I am pleased to see more responsibility is being taken towards supporting a Climate changes by our Govt & hopefully all of us. I am personally committed to that. My hope would be that it would be fair and just and that people would be supported in the changes they make. As the daughter of a farmer - who was innovative in his day, I'm sure he would have been among the first to try alternative crops which would have reduced the stock numbers. I would hope that no individual group of farmers, forestry, oil & gas etc would be vilified but helped to move forward on this journey to better sustainability. I agree that we need to all do our part - in lifestyle & financial support to bring global warming to within the 1.5 degree margin.

[REDACTED] h	[REDACTED]	55-64	Wellington	Yes	<p>I fully support the Climate Change Commission.</p> <p>I would like the government to encourage farmers to transition to regenerative farming practices.</p>

I appreciate the draft plan. This is a positive step. I do however support increasing the targets.

The climate is our great intergenerational problem and it requires intergenerational solutions, which usually defy the collective wisdom of governments. No matter the political difficulties this is a matter of intergenerational justice. I support the notion that we should seek to exceed the average global effort to reduce (long-lived) GHG emissions. As identified by Professor Jonathan Boston there are at least two good reasons to boost the targets:

1. our per capita incomes are higher than the global average, and thus we have a greater capacity than, say, India or Bangladesh, to contribute to the global effort; and
2. our cumulative emissions per capita to date far exceed those of the global average.

*Physical and mental well being concerns for whanau and communities vulnerable to climate change effects. A couple of other points to note:

*Decision-making at all levels must include Māori, Pasifika, and disabled peoples in formulating the climate emergency response.

*Our response must be open to brave and farseeing innovations that take into account the disproportionate impacts of
storms and sea level rise on physically vulnerable communities and
loss of employment on lower paid workers in affected industries

Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.

Thank you for putting climate action forward as an issue of importance. Urgent and ambitious action is what we need as we are pushing the planet close to the edge already and there is always a lag between legislation & practice.

Lets go sooner on phasing out internal combustion engines as they are huge culprits. Combine actions on ethical farming & land care incentives.

Perhaps wastewater management and commercial composting creative solutions for towns & suburbs can be part of our reimagining our current landfill situation.

Support is a strength of our nation & helping individual

I support bold action to reduce our carbon emissions. Animal agriculture in particular need drastic reductions this is a simple & effective way to reduce emissions & increase the health of the population. Our population consume unsustainable volumes of meat & dairy. Lets support the population to adopt a more plant based life style.

I feel the commission's Recommendation
need to be adopted in full
by the government & as soon
as possible

Ideas to consider including in your response

- **I welcome this draft roadmap** from the Commission. To all involved - thank you.
- **I support more ambitious action** to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- **I support a just transition.** Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- **Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.**
- I realise that everyone is going to have to make changes to achieve the outcomes we need. **I am willing to play my part** and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

New Zealand is a world-leading country in many areas; we can lead in this as well. We need to be reducing emissions by encouraging people to use public transport and other ways of transporting themselves that do not use harmful emissions.

I am willing to play my part and I support bold action.

I want a safe and healthy ^{world} for my children and their children.

I support a much more ambitious response to ~~that~~ Climate change, with a focus on locals ~~paying~~ bearing the ~~responsibility~~ responsibility of action rather than paying others to take action on our behalf. We in NZ have proven that we can rise to the challenge when we need to take decisive, quick and inconvenient actions, we are a creative and resilient nation able to take on this challenge.

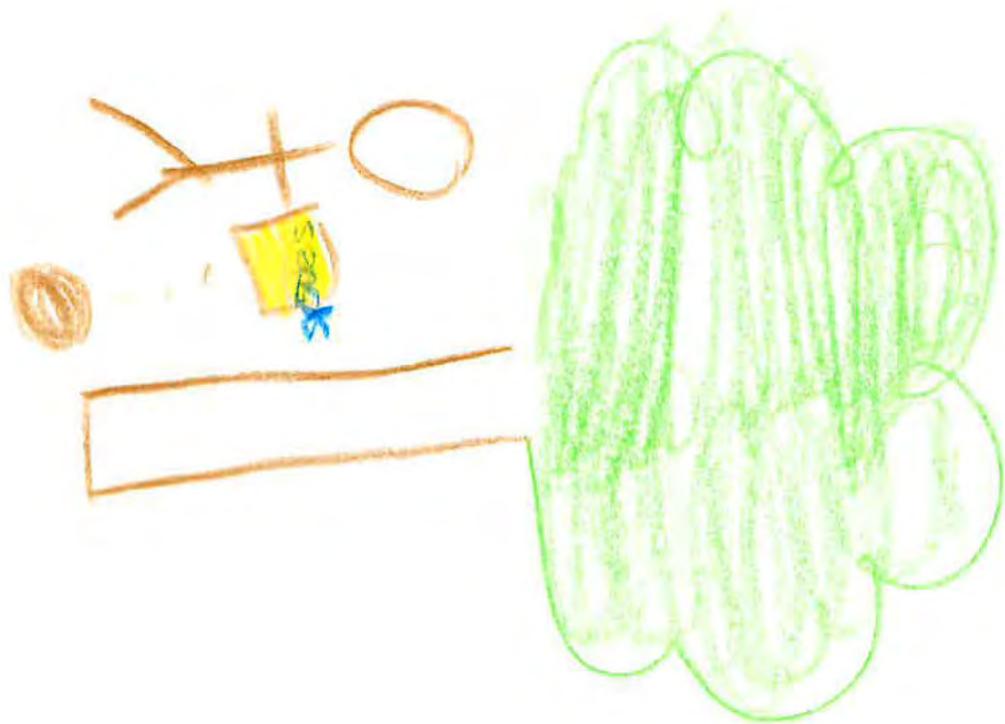

I am certainly willing to play my part in whatever bold action is taken.

I also support ~~the~~ further work toward the use of alternative fuels and carbon capture alongside other bold actions.

#lets do this

Dear Jacinda Ardern

Please could you plant more trees and not you
make other people get electric cars please
can you make people not just
throw rubbish on the ground make
sure that you don't do that and
throw it in the recycling and you
need to not drop goods present
to us and we need to make
sure we don't throw rubbish in
gutters so that Animals stay in

The world Animals are special you
need to use less transport and use
look after the horses instead
Solar powered and need to
of electricity do less
bike or scooter or

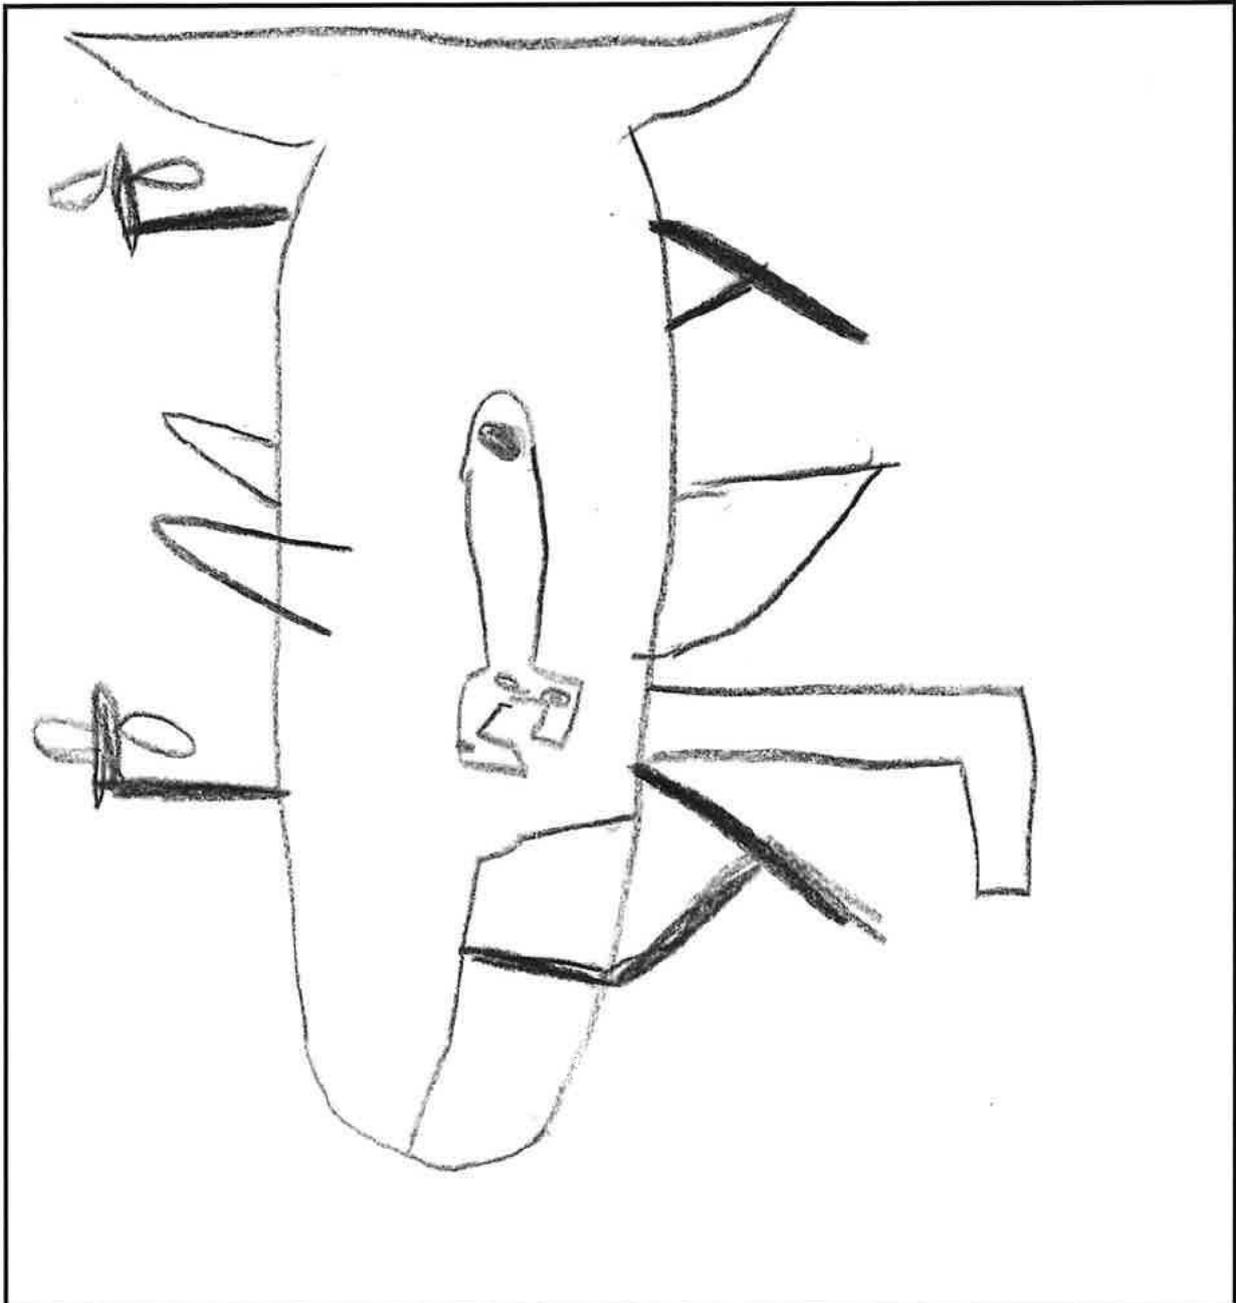

Stuff | let save horses
and live world

Kia ora, my name is [REDACTED]
