

# NDC advice: Open Zoom

22 June 2021

**He Pou a Rangi**  
Climate Change Commission

# Main NDC recommendations

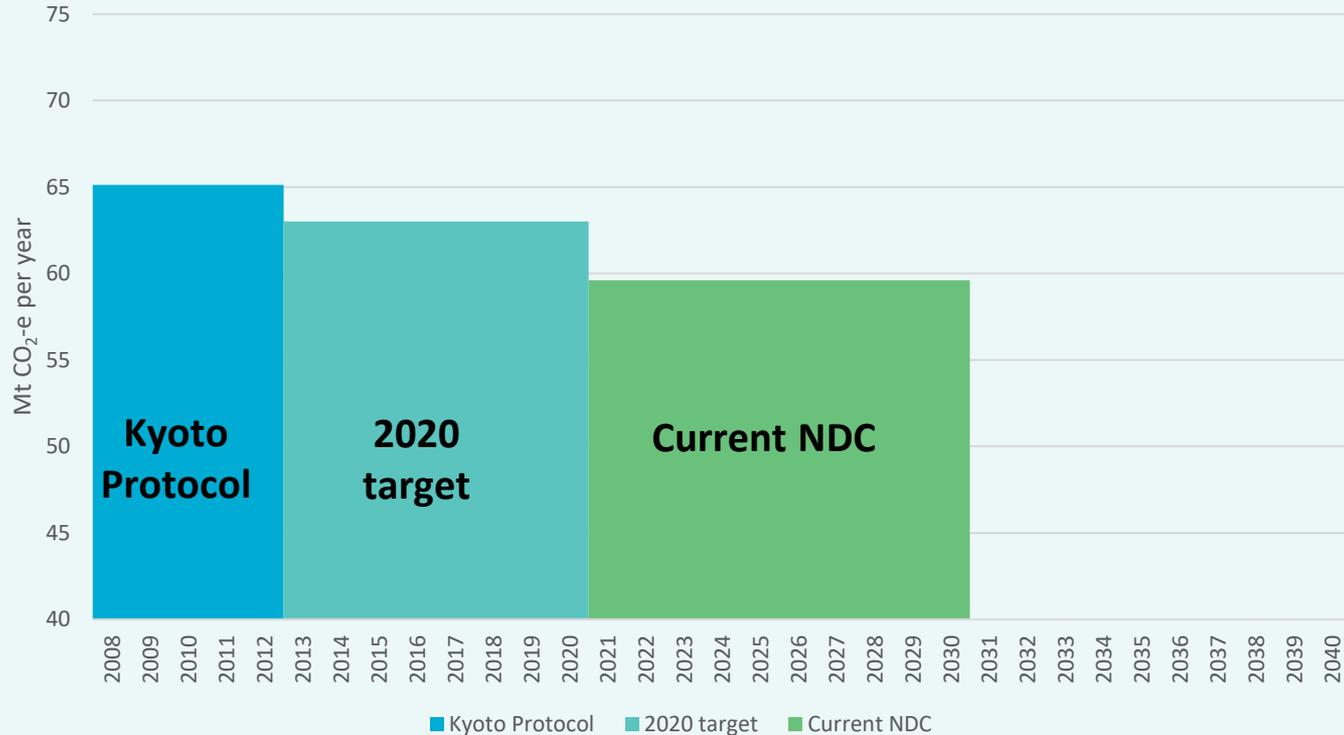

- We advise that the first NDC is not compatible with Aotearoa making a contribution to global efforts under the Paris Agreement to limit warming to 1.5°C above pre-industrial levels.
- We recommend that to make the NDC more likely to be compatible with contributing to global efforts under the Paris Agreement to limit warming to 1.5°C above pre-industrial levels, the contribution Aotearoa makes over the NDC period should reflect a reduction to net emissions of much more than 36% below 2005 gross levels by 2030, with the likelihood of compatibility increasing as the NDC is strengthened further.

# Consultation feedback on NDC

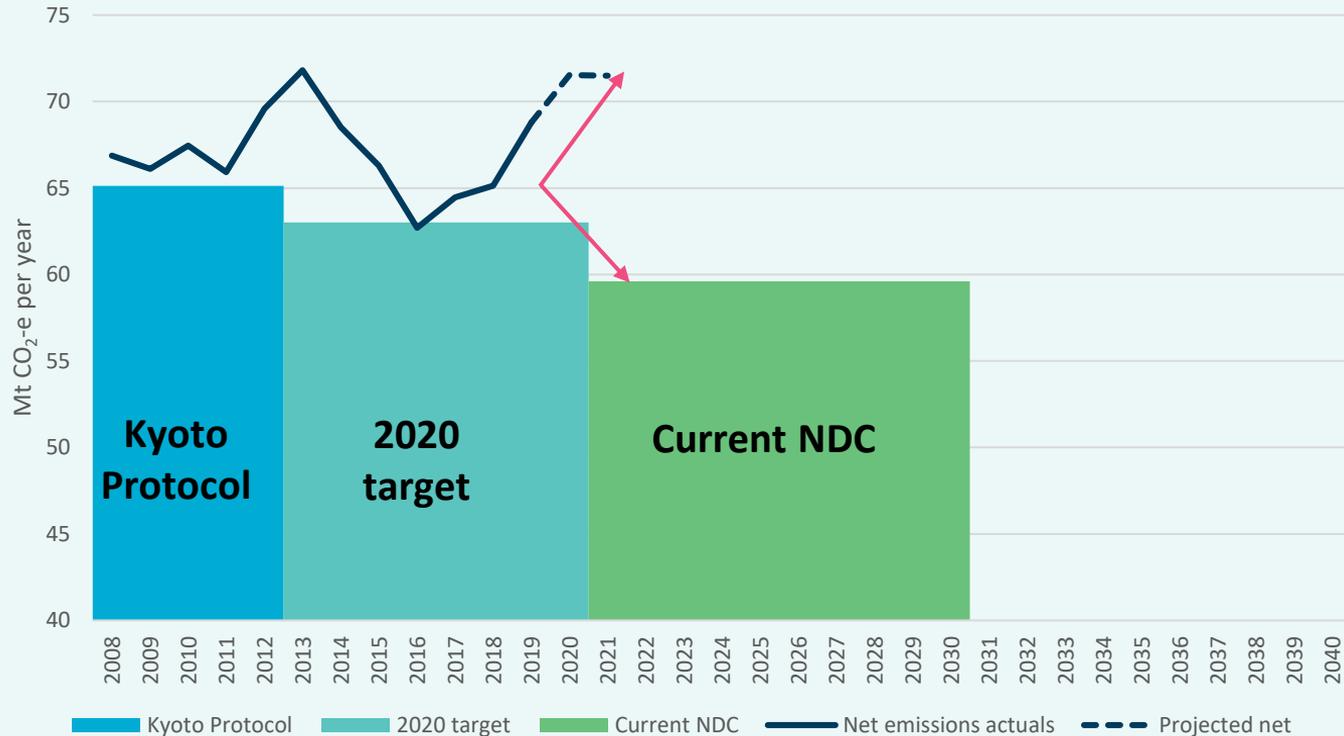

## Key themes:

- Submitters did not understand why the emission budgets allow more emissions than the NDC
- Opposition to the use of offshore mitigation in the NDC
- Mixed views on the ambition of the NDC recommendations:
  - about 1/3 wanted stronger action
  - about 1/6 agreed with the recommendations
  - about 1/2 wanted less action

# Why budgets are different to NDC

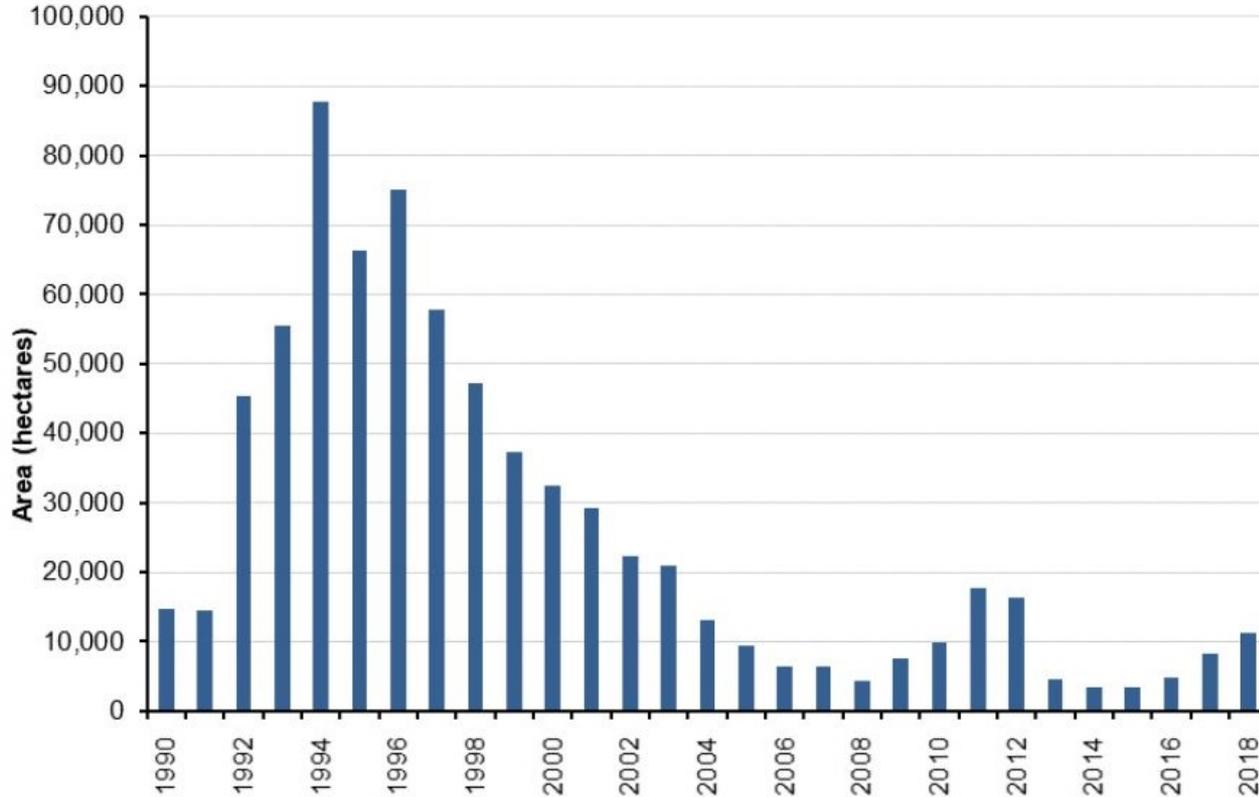

# Why budgets are different to NDC

# Questions?

# Why budgets are different to NDC

# Changes since draft advice

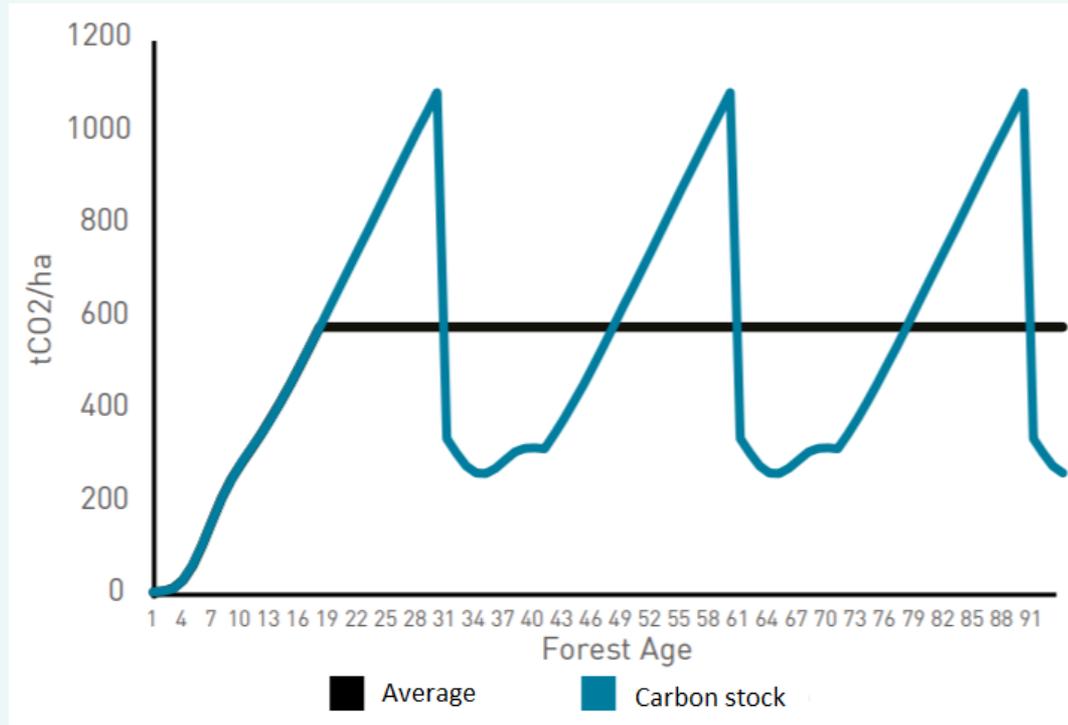

## Quantitative changes

- Updated the approach to use the new greenhouse gas inventory figures
- Updated the approach taken for synthetic greenhouse gases to be consistent with the other gases

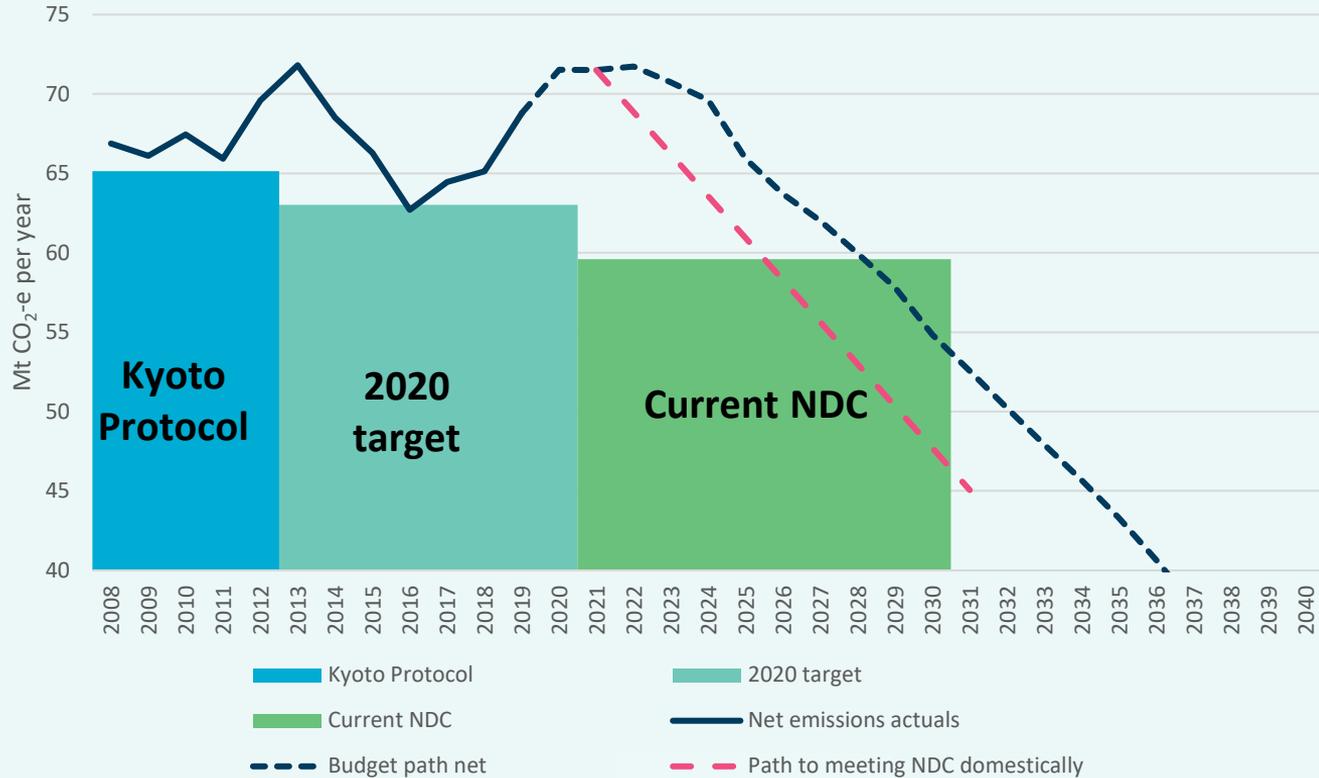

Increased range from applying IPCC pathways to NZ by 1%

Greater explanations added of the context of the NDC

# Forest sequestration

# Meeting the NDC domestically

# Beyond 2030
