Please consider kids like me and our future when you finalise your report!

# Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

## Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to [kate@anglicanmovement.nz](mailto:kate@anglicanmovement.nz) before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: [haveyoursay.climatecommission.govt.nz](http://haveyoursay.climatecommission.govt.nz)

NZ needs to be part of a global action

Action taken needs to be fair & just

Diesel vehicles must be controlled as well as petrol - they emit more emissions - this may be best.

Lithium batteries shd. be phased out asap.

CO<sub>2</sub> absorbers in addition to trees must be encouraged.

We need to develop alternate sources of energy to produce energy using

Climate change is already with us. We must adopt measures to deal with it.

### Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
  - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I support taking collective action to reduce climate change. Encourage farmers with what they are already doing. Farmers on T.V are way ahead of the general population who want others to be responsible i.e. cars we need to continue to try. History shows that rising tides may be with us whatever we try and we will need to accept it that

I support the recommendations of the Climate Commission's report.

I intend to personally support the recommendations in my daily life.

I support New Zealand's action for our country and as a world influencer/leader.

I support this transition being done in a way that does not create more inequality in our NZ society.

I'm on board with the CCC measures particularly those to do with transport emissions, the way we build our houses and methane reduction.

These will be difficult to adopt and achieve. Leadership is key: from central government and CCC as well as other organisations not individuals. We should not yield to special pleading from vested interests - the incentives for change should be sufficient for all to adopt change towards making our planet safe and sustainable.

- Great to have long-term goals
- But we also need short-term (next 10 yrs) urgent action
- raise the carbon price immediately from \$25 max to \$50/tonne by buying ~~the~~ NZUs from the market.
- place immediate additional fuel taxes on (above the carbon price)
- introduce severe congestion charging in Auckland (via tolls)
- use the emission trading scheme as much as possible, rather than regulations — that way we protect poor people who maybe have to use fuel

**Ideas to consider including in your response**

Thankyou for all you are doing to help reduce and change the course of current climate change.

We encourage you to continue to reduce climate change ~~and~~ in New Zealand and be an example to other countries by implementing measures that are fair and just to all.

There is so much in New Zealand and the world that holds beauty and helps to restore our minds souls & bodies. Our flora & fauna are unique as are so many in all other countries.

Thankyou for your time in considering this Submission.

#### Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
  - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

# Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

## Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to [kate@anglicanmovement.nz](mailto:kate@anglicanmovement.nz) before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: [haveyoursay.climatecommission.govt.nz](http://haveyoursay.climatecommission.govt.nz)

I support a just transition. I believe that those who can afford to pay for the transition should bear most of the cost. The most vulnerable in society need to be supported.

I also think that pressure must be brought into the high polluting nations on the panel and believe NZ can lead the way  
Lead  
~~Lead~~ us back to being 100% pure NZ

New Zealand is a great nation and has a lot of visibility on the world stage. We need to be good global citizens and we need to demonstrate to the world that we take responsibility for the environment.

I support the measures on the draft roadmap from the Commission.

We must do everything possible corporately & individual to help in reducing climate change and make the world a better place for all.

The government must take the lead and listen to the people in policy making and offering change that are necessary & fair to all.

Time for change is now!  
Let's make a good & workable plan for ourselves and future generations.

I encourage the current government & future governments to focus on the 1.5 degree target within a manageable time frame.

I think the population will accept change gradually eg. no plastic bags at the supermarket - seemed such a nuisance at the time but now it is just part of our lives.

Thank you to all involved in pursuing these goals.
