

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

I am willing to play my part / I support the submission & I welcome this Anglian Initiative.

Start small
Start simply
Everyone can do something
For me, living in Central Wellington I will —

- Use public transport
- ~~Buy~~ Buy an EV
- Talk it up
- Eat out of my veggie patch
- Walk more - eg going to
- Pray for the future town

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I support more ambitious action to be fair to other countries and future generations. As a mother to three young people (29, 25, 21) I know that this is very important particularly to their generation and they look at us as guardians of the planet and see the damage we have collectively done. They even wonder if they should have children (my grandchildren) and put more stress on our damaged world. New Zealand is a light for the planet, what we do here causes ripple effects. We need to set a good example to the world and do all that we can to minimize our impact on our climate/environment for our children and children's children. Time is of the essence. . . .

New Zealand must adopt policies so that it produces mineral resources in like for like quantities that it consumes. It is detrimental to all nations if particular nations consume more minerals than they produce.

New Zealand's policies in this regard are arguably too restrictive at present.

I support the planting of more trees & other vegetation including non-natives especially in urban as well as rural areas as long as it doesn't reduce productive pasture for animals for food & clothing.

Much of the vegetation should also be productive.

I support continued study & research on Adaptation to Climate Change as change is unstoppable due to natural as well as human induced activity.

I am totally on board with these recommendations. I am encouraged that leadership in NZ has put forward a plan in the zero carbon act. ^{with the work of the commission.} I am encouraged that I can add my voice in support of all those working to this end. ~~I am trying to my utmost to~~ ^{to live} that Roadmaps like this one encourage us all to look at concrete ways we can reduce emissions in the way we live. I am making changes in my own life; ^{more, consistently} walking ^{but} I believe the roadmap needs to include ^{ways} ^{small in themselves} ^{collectively significant} ways to support those in petrol related industries, ^{of aspects} of farming, to transition to ways of working that ~~are~~ are healthier for our environment.

I am worried by what I hear about the effects of climate change on my life my children's lives and those of the generations to follow.

Like everyone else I am unsure what action needs to be taken. I ask that you, our government reads, sifts through, analyses the scientific literature and takes action based on that. Even though it may be politically unpopular.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

I support any serious action to promote our recognition of climate change and our part in it.

I support a just transition to recognise the effects on those who are affected by increased cost of living

After reading the Climate Commission Draft report I was absolutely shocked + appalled that the New Zealand Govt. had promised to make changes to achieve Net Carbon Emissions by 2050, and have made very minimal changes to achieve this. In order for Aotearoa's residents to have hope in our governing systems, we need to trust they will do things that they promise! The draft report states that if we act now, NZ could redeem their position ~ So let's do it! Also - the carbon emissions from the Agriculture Industry are MORE than the entire transport industry COMBINED - although, in the report,

There is absolutely no mention of reducing agriculture / MEAT intake, and there is so much money being poured into renewable energy + green alternatives (solar) & make fast tangible change for our economy + task buds but will save our world in the long run and save WAY MORE MONEY DOWN THE LINE!! So this is economical thinking. Bless you

and save WAY MORE MONEY DOWN THE LINE!! So this is economical thinking. Bless you

Kia ora,

It is critical that we take action on climate change now. We must take the actions outlined in the Roadmap from the Commission and take more ambitious steps to make sure future generations don't live with our consequences.

I support us making a just transition so that those who can afford to pay bear most of the expense.

Please ensure that New Zealand is committed to doing what we can to keep warming within 1.5 degrees.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

It is great that the government is taking action against New Zealand's impact on Climate Change. There should be support put in place for the communities and industries that will be the most affected. If struggling with the set targets and their time restraints, more time and money should be put aside for this important matter.

I believe that ~~the~~ NZ should be
gunning for an increase in
native tree planting. It is very
important for the environment and
keeps our country green and beautiful.
I believe 25,000 h of ~~land~~ of native
forests should be an annual goal.
This goal feels achievable and necessary.

Amen,

I support this draft from the Commission. I believe we need to think about those most vulnerable in this and we as a society can hold this as we take climate action. I think Aotearoa should be doing more as a small country to significantly reduce our emissions and ensure an earth for the future generation. I am willing to play my part and support others to support this bold action.

I think that this draft is a wonderful start, but I think that as NZ is in the position to do more to prevent climate change we should take significantly more ambitious action, and faster.

Furthermore, I think that the transition to being a more eco-friendly nation should be just. Those who can afford to pay more should. I know that this will involve significant changes in all of our lives, and I am willing to play my part.

I support bolder action!

The report from the CCE is crucial in determining a sustainable and climate-friendly future in NZ.

The report needs to highlight systemic failure in our agricultural and industry and in the private sector to combat carbon emissions. Exponential decline of emissions can be achieved in our technology sector ~~and industry~~ through innovation. Bringing forward targets increases risks towards inequality and injustice, and ensures our planet remains viable for our rangatahi.

We all recognise that NZ and the globe face some tough decisions in the coming years to make sure we tackle climate change, tackle it fast, and tackle it quickly.

It's great that the Commission has put forward some plans to help in this and I'm keen to see these adopted and championed hard by our government. But our government also needs to be bold, it needs to go further, and it needs to be inventive in making sure our vulnerable communities won't be left behind. This is tough no doubt. But I'm so keen to see NZ tackle this well and keen to play my part in that. We cannot afford to punt this issue further down the road.

Ideas to consider including in your response

Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

I am in support of the Climate Commission's draft advice to our government, and am in support of even more ambitious action for our government to take to reduce NZ's net emissions. We have time, resources and opportunities to take a proactive approach and we need to continue to work towards severely reduced emissions as a nation. It is also important that we go about this in a just manner to best support those most affected: those who can afford to pay for this transition should take on the responsibility to do so, and as a result lift up those who are vulnerable as we move to a low carbon nation. Please work to hold our policy-makers and enactors to account in order to minimise our net emissions and keep warming within 1.5 degrees. In recognising that this roadmap will mean we all have to commit to making changes to achieve these goals and I am willing to play my part in this. I support bold action in making and committing to these policies and believe we can do this if we work together as a nation.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

(already connected)

- I support many actions to address climate change, but this needs to sit alongside other environmental priorities.

Write your submission here. It will be more powerful in your own words.

- I am concerned that a hurried transition to electric vehicles will leave behind those who rely on affordable private transport and cannot afford new vehicles, and who have no access to 'free' charging. I am also concerned about the electricity market becoming extremely powerful if on addition to electric car "monopoly" the use of gas and wood for heating is banned. I am concerned that solar energy has not been researched and implemented enough, and that our electricity networks + ^{systems for sustainable} recycling of batteries are too immature to cope.

- Consult with all treaty partners + ensure ~~that~~ ^{their} concerns around impact on Māori members are heard. It's not about financial compensation but about equity in a much bigger sense.

Ideas to consider including in your response

- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

e.g.

- Ban air conditioning used to 'chill' shopping malls and office buildings below 22°C.
- Extend rail network for public transport and make affordable.

Address NZ consumerism + a culture of "replace + throw away" of goods (not car be fixed).

Increase planting of trees, repair waterways,
maintain + increase wetlands.
Decrease complete clearing of trees + plants from
land to make way for housing.
Infill housing → include green spaces (community)
Make electric cars more economically viable
Make energy sources such as solar + wind power
more economically viable
Continue minimising use of plastics + reusing plastics
Encourage recycling of gardens or own gardens
Encourage community gardens
