

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including up to 25,000 hectares of native forests annually.

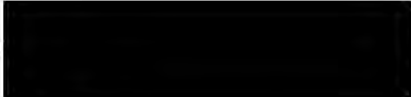

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

I fully support any climate changes where All is nothing but Right, and Just with the People, Greed, money, or Power will not solve anything. I stand by my faith alone 100% God is Great Amen.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I am 22 at the moment. I have accepted at this point that unless drastic action is taken, I and my peers may not live to 60. I dread having to endure, for most of my ^{impending} adult years, the long drawn-out effects of climate change that at this point seem inevitable. Therefore I wholeheartedly support more ambitious action, along with a more just transition - as I realise that however bad it may be for my immediate peers, we are not the ones who are going to bear the brunt of climate change (or who are already bearing it), and those who can afford to exploit the Earth's natural resources (and exploit working class people) can also afford to fix up the mess they made.

Please ensure that all Aotearoa's commitments are consistent with doing our bit to keep warming within 1.5 degrees. But even 1.5 degrees isn't good enough - we should be aiming for no more than 1 degree, though that may be improbable at this point. I also implore the government to do their part to hold corporations accountable. I am willing to do my part on an individual level, but individual action can only achieve so much without full system upheaval. We must take a bold stand as a country.

The problem of climate change has fuelled conflicts across different parts of the world. There is a continuous need to get global warming under control. I fully support all initiatives aimed at achieving this goal and I ask that New Zealand also support the Pacific Island nations in any way possible towards achieving this goal.

Ideas to consider including in your response

Land fill is the area that has to be addressed first before travel & renewable energy or beef reduction. Nappies and plastics of course need separating. And looking at reducing at a consumer level with high penalties.

NZ has been a world leader in so many areas. When I travelled to world I was proud when people would recognise NZ because of the forward thinking, progressive country we are.

Let's ensure that this change to policy is another one of those things NZers can be proud of. ~~Let's~~ Let's really be radical about change.

Dear Climate Commission,
 I really appreciate & encourage your work & fully support the recommendations you will make to government. I encourage you to go even harder!
 NZ leads so awesomely in many spaces & I would be so proud of team of 5 million if climate care could be one of these spaces too.
 Let's go hard & go fast!!
 Ngā mihi nui ki a Kaitiaki

Ideas to consider including in your response

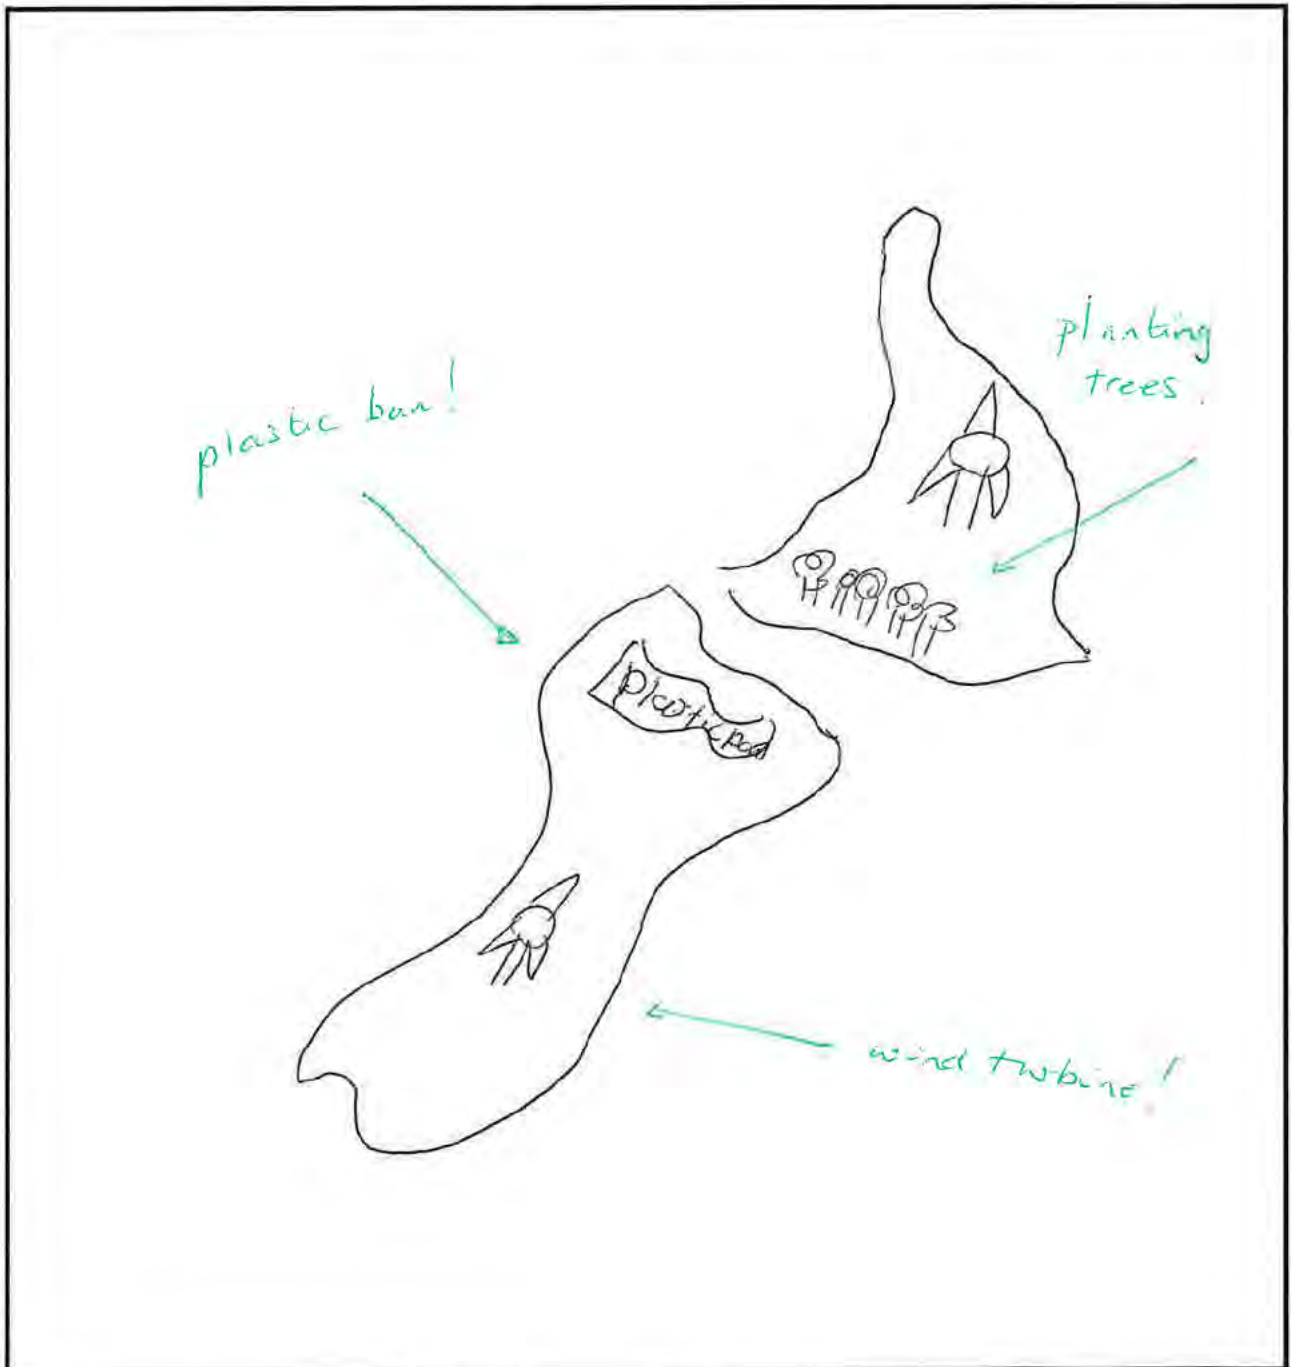

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Kia ora, my name is _____

In 15 years from now, I will be 26 years old.

I am concerned about the future of our world, our common home in which we share life with all things. I know we can do more for our global neighbours and future generations by taking ambitious action at home in Aotearoa.

I hope in 15 years time, Aotearoa NZ will look like (draw a picture below):

Please consider kids like me and our future when you finalise your report!

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including up to 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

I strongly support any governmental action that will actively address the issues contributing to climate change, eg. emission of fossil fuels, unnecessary waste of consumer products, an apparent lack of awareness of the perilous state the world is in, in many parts of the world.

Please know that I support ALL the proposals listed on the reverse of this page, and believe we CAN DO THIS, as the WILL of our TEAM of 5 million can! We can do this with JUSTICE and MERCY, and by showing compassion. With creativity + innovation, we can help dairy + sheep farmers to diversify; develop practical alternative energy systems (solar panels on ALL new builds + Cathedrals, etc) and continue to expand quality public transport. We can plant more trees, not just in bush + forests but along vulnerable coastlines + help our Pacific neighbours with this, too. Please do ALL you can to do our share towards keeping warming within 1.5 degrees.

In 15 years, I'll be 29. I ~~wish~~ ^{hope} might even have a family. We need to ~~do~~ ^{more} to support our children and their children. NZ needs to pick up the pace of our Climate Acts, increasing the proportion of travel ~~of~~ ^{by} walking, biking and public transport will make a large difference. My family owns a hybrid car, but this only goes 40k on electric. The amount of exhaust fumes going into our air is quite shocking. I don't want my future children to live in a world where fresh air is only a story, a memory. Do better, New Zealand!

Our first lockdown in 2020 has shown us all the impact our way of life makes on our natural environment. It also showed us all the joy in rediscovering nature in ^{our} oceans, streams, trees & air, to name a few. There were many stories of ~~a~~ reconnection with nature.

Therefore, I support the government in taking action to keep warming within 1.5 degrees. And I ask that careful ~~and~~ consideration be given to how this change will be funded, & how people will be supported to make this necessary change. I am willing to do my bit in ~~solidarity with others~~.

I agree with all the options put forward by the Commissioner. Leadership is required to do so and potentially some compensation to farmers or incentivising both the reduction of livestock and the planting of trees, especially given the long term compared to the short-medium term of income that comes from livestock. (and to knowage agriculture there)

The immediate + medium term needs of the vulnerable also need to be protected esp during the transition period.

This would include the subsidisation of low emission heating + public transport

God bless the Commissioner and its work, and give courage and inspired leadership to all those in the community taking these steps and the bravery to speak and help others.

What has appalled me the most about NZ has been the development of monolithic dairy farming industry

Whereas farms with 300 dairy cows was enough in the 60s, 70s. sufficient, now it seems that it is allowable to farm 2000 beasts on the same acreage.

Dairy farming urgently needs down scaling

We need to be at 50% reduction in emissions

We need organic regenerative agriculture

Climate change and our actions to prevent it
is incredibly important to me.

We are the guardians of this space & our actions
set a precedent for the rest of the world.

lets take a stand, and make a change. lets be bold,
lets be just (those who can should pay more).

~~I would~~ In addition to the proposed changes, I
would encourage you to consider adding mandatory
a mandatory carbon offsetting tax onto petrol and
airfare sales.

I support an ambitious approach to climate change. We need to do more than the proposal to ensure we're looked after in the future, including future generations, & also our Pacific neighbours.

In saying that, I want to see a fair & just approach so we don't create new and/or deepen inequalities.

We pray that God provides guidance & wisdom ~~flow~~ to all those involved in decision making.

Producers need to be kept to ~~the~~ account.

Domestic recycling and composting etc on a household level is good but feels really inadequate when producers continue to produce problematic items like soft plastic and non-recyclable packaging etc.

I think that producers need to be forced to take back their own products after they've been used if they can't be easily recycled so that they have to face the problems that they are ~~creating~~ creating on huge scale.

Please contact me about future Anglican actions for justice and transformation:

Yes please No thanks

Write your submission here. It will be more powerful in your own words.

I support a just transition.

Those ^{people} that are vulnerable need to be supported during this transition.

Supporting individuals, communities and businesses that are most affected is important in transitioning into a low carbon economy.

I am willing to play my part by making necessary lifestyle changes ~~to~~ !

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

My submission

Thank you for this opportunity from the Climate Commission to have my say.

In the past Aotearoa NZ has shown leadership in the global community on Women's Suffrage and Nuclear Free issues. We are known to show grit and do our bit for a ~~£~~ fair, more just world.

Our Covid and Mosques attack responses are part of our current profile in our ^{shared} world.

I support a just Transition where those who can afford to pay bear most of the cost.

Please ensure that all NZ's commitments are consistent with doing our bit to keep global warming within 1.5 degrees

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including up to 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

No diesel vehicles, bicycle lanes whole
country, less flying, low rego costs motorcycles
No coal fires, No farm pesticides

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

My submission

I am willing to play my part and i support bold action. I would like to see a transition from petrol to fully electric public transports, at least in the city center (see Melbourne model). I want the government to support and incentivise all people, privates, all business willing to do their part into moving to renewable energie sources or low emission business (i.e. installation of solar panels or moving to a more organic but less productive way of farming.) I agree with the ban of importation of petrol consuming cars and machinerries and the other options proposed in the draft, but i think it needs to be done in shorter times.

assist

- ^{all} the bullet points overleaf to
- I fully support reducing climate change.
 - I see education from crib to coffin as one of the most important factors in allowing climate change reduction to happen.
 - As a 'so called' developed nation - we have contributed more to growth of destruction of the climate and therefore should and must provide more leadership and financial support in rectifying the issues. Worldwide indigenous cultures have through ^{2000s} years of centuries in stewardship of the lands ^{they} have been snubbed by those who extract and want more of earth's resources. The 'educated' need to listen to those who have tended the land for generations and preserved the balance of take and restore for ^{all} future generations.
