I don't think reducing the population of cows and sheep is fair for them, because we can't control them and it's animal cruelty. ~~It~~ It makes no sense, and it's in their nature to reproduce.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

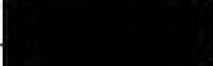

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. By 2050 they are wanting all vehicles to be electric and those that are fuel based are going to be heavily taxed. I feel this is unfair for those who rely and can only use fuel based vehicles.

Do not reduce numbers of cows and sheeps as this is some peoples livelihood. Do not ban the import of internal-combustion engine by 2035 as the batteries of electric vehicles are ~~not~~ a renewable source and are extremely hard to recycle and will become the "new" version of plastic. When planting the 25,000 hectares do not decrease the land of farmers by doing this as it is how they bring money into their families & food on the table for their family.

Its the right idea, we need to make change to support our climate, however, we need to be considerate of where we are making changes. We already have a reasonably climate-friendly country so I dont think we have to change so much. Leave the farmers alone or support them to ^{have} become carbon neutral farms instead of reducing their stock

Handwritten scribbles and notes at the top right of the page.

Encourage other countries to make changes, I understand NZ could be better - but we all care and we all want to make a difference. NZ needs to set an example and encourage other countries around the world to do something about it. Please don't, essentially, punish us and our future ~~generations~~ for what is, effectively, someone else's problems. And look to the cities and factories more, instead of the farmers. They are really trying to help.

** we want to be able to encourage other*

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

- By having electrical cars only by 2035 can be dangerous of the stuff put in the batteries which are harmful to the people (mainly children), who go down tiny holes to get it. Would be better to reduce cars & just focus of public transport.
- With the land by reducing sheep & cow, if it gonna be used for stuff we can use like veges & fast growing trees

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I think that this is a good set of goals and will help with the reduce of climate change but I also feel that the decrease by 15% of cattle and sheep will take away possible jobs and income sources.

Reducing the amount of farms will cause a large drop in employment rates. This means it will be nearly impossible to do so. We should rather aim to reduce stocking rates by breeding and using technology to ~~reduce the~~ produce stock that produce ~~at~~ a ~~higher~~ rate, allowing us to reduce stocking rates. We can also reduce the amount of fertilisers by planting crops that are proven to reduce leaching.

I don't like the idea of the electric car because it's not going to be efficient if you have a bond to tax

I also don't agree on the sheep and beef because it will reduce people's jobs

I also don't agree with the trees because there is a heap of nice land that does not need to be into trees.

Ideas to consider including in your response

don't agree with electric cars because I have to travel heaps for squash and also we have a boat so it would not be convenient.

don't agree on reducing sheep and cows because my dad works in that business with farming software.

don't agree with planting heaps of trees because you are taking away peoples homes and farms

this is a big culture of NZ

Our world should be sustainable for our future generation
We need our New Zealand's commitment to do this

😊 ♡ ✨

Ideas to consider including in your response

- **I welcome this draft roadmap** from the Commission. To all involved - thank you.
- **I support more ambitious action** to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- **I support a just transition.** Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- **Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.**
- I realise that everyone is going to have to make changes to achieve the outcomes we need. **I am willing to play my part** and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

I think the government should take more
they control what comes into the country
we should use more glass jars and
glass containers in our supermarkets.
Not put veges in plastic containers ect

We should make a long weekend dedicated to tree planting. Cheaper public transport.

It would be great if businesses
(like farmers) are also not heavily
affected by this change.
I am willing to play my part
in trying to contain climate change.
