

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I welcome this draft reading, especially not importing any new internal-combustion engine cars - I think there's a lot to be said about the benefits of electric cars. And by 2035, they will be much more advanced than right now - Tesla didn't exist until recently.

For a long time I have been trying to reduce my own emissions, to the expense of my reputation among my peers. I support all of these changes, with the knowledge that in the wrap-ups readily farming emissions will be strongly opposed. Any action that prolongs the earth's life so that my grandchildren do not face this same problem that torments me today. I want a world full of people who appreciate how much the earth does for us.

I welcome this draft Roadmap. New Zealand needs to set an example for both younger generations and countries.

I support this transition and am willing to play my part - though the government should understand that those unable to contribute should not bear extra expenses.

I like the idea of renewable energy

- Reduce Sheep numbers because we have more sheep than people

- The tree planting idea is a go!

- I don't mind the idea of increasing the proportion of forest

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

Climate change is a serious issue that could have detrimental effects on our planet. There is no planet B!

It can be hard to transition into sustainable ways due to costs but everyone should be supported.

Our country is known as a "Green" country but that name is slipping and we should do something about it.

~~I believe that~~

I believe we cannot stop Global Warming, we can only slow it down. I believe that Global Warming was always going to happen, we have just sped it up. ~~I~~ I do realise everyone is going to have to make changes to achieve the outcome of slowing it down. I am willing to play my part ~~and~~ in helping to slow down.

This could be achieved within 5 years if serious money put into it NOW.

~~Most important thing is a complete overhaul of how our rubbish is disposed of.~~

— much more recycling of all on shore

— building rubbish, e.g. gip board, concrete, recycled + reused instead of dumping in landfill.

— every household given a bin to store food waste to be collected + turned into compost.

Don't agree with only electric cars as implications for producing enough power. Instead look at bio fuels to convert

Cars
Don't agree with no gas for domestic use

I welcome this draft roadmap. It will be extremely difficult and also affect many people. This needs to be more carefully considered especially for our farming community. Dairy farming, wool, make up the majority of our exports. Even for gas in restaurants are needed critically.

I support this if it has been considered on behalf of everyone.

Ideas to consider including in your response

Decreasing sheep and cow population = Bad idea

I do not support this idea. Firstly, these are important food sources for New Zealand and multiple countries around the world. One of the biggest problems facing the world is hunger, and by decreasing such a valuable food source you aren't helping this problem at all. Additionally, it isn't the animals that are the problem it's the people. For example, take the climate improvements observed over lockdown. The cows didn't stop farting ~~either~~.

Also electric cars aren't all they are made out to be. The lithium mining needed to produce the batteries is detrimental to the environment. Hydrogen powered cars are good though.

I support changes to help the environment. ~~However, some of these ideas are based on~~

We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

NO ITS bullshit 😊
I support farmers
ITS unrealistic
♡ u cindy
♡

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. By reducing 15% cow and sheep numbers on farms there needs to be some sort thing that supports farmers considering ~~go~~ so much is being taken away from them.

i dont think we should ~~cut~~
reduce sheep and cow numbers
because in new zealand it is a
huge part of our industry and
compared to other countries our
sheep and cow farms are
pretty sustainable.
