

# Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

## Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to [kate@anglicanmovement.nz](mailto:kate@anglicanmovement.nz) before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: [haveyoursay.climatecommission.govt.nz](http://haveyoursay.climatecommission.govt.nz)

To increase public transport, I think there should be a decrease in price, so it is affordable for everyone.  
We should plant native trees if it is unused land.

#### Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
  - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Yes I agree to reduce the climate change  
We definitely need to plant more trees  
and native bush which will reduce  
the methane from farm animals.

I think that most of these ideas are going to help our planet a lot. However there are some ideas such as reducing sheep & cow numbers by 15% that I don't support. This is because people need their products to live. Also, if we reduce the number of sheep and cows, it will affect the economy.

#### Ideas to consider including in your response

As Anglicans we are committed to the mission of caring for God's creation. Sadly successive generations have not always been knowledgeable or aware of the damage that human beings have inflicted on the environment. More New Zealanders need to know about the climate crisis and how each individual and community can contribute to making a real difference. My concern is that as a country we have been far too conservative in our responses when compared with other developed countries. What is needed are multiple strategies at multiple levels which are intergenerational. As a Church, let us pray for God's continued guidance as we care for God's creation in ways that are more truthful, more just and more loving.

I welcome this draft roadmap  
I support a more ambitious action  
NZ per capita has contributed more  
to emissions and therefore should  
lead internationally in this area  
Our family is committed to reduce emissions  
we own an electric vehicle & a hybrid  
and have minimised our air travel.  
I support a just transition so that  
people on low incomes can transition  
appropriately.  
Please ensure that all NZ's commitments  
are consistent with keeping warming below  
1.5 degrees  
we as a family are doing our bit. NZ  
needs to be bold to ~~keep~~ justify  
its clean green image internationally.

I support a more ambitious action than the proposed road map. We have created / contributed large amounts per capita so our response should consider this. Our Pacific nations are suffering far more than us despite contributing far less.

I support a just transition where those who can most afford it bear the most expense so that those who are the most vulnerable are not further disadvantaged.

As well as ↓ cow & sheep numbers ~~was~~ a country we need to be more strategic about how we operate our tourism industry. Every tourist who arrives here is contributing to climate change by flying here. Maybe we should encourage fewer higher value tourists

#### Ideas to consider including in your response

*we need to be bold*

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
  - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

# Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

## Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to [kate@anglicanmovement.nz](mailto:kate@anglicanmovement.nz) before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. I think that a change is needed to keep our planet at the ~~not~~ peak of its survival. Our planet is a amazing place that deserves to be preserved how it is, instead of progressively deteriorating in the way it is now. As the current people on this planet I think that we hold an entitlement to taking action further.

This is good, but still not enough. Just like with NZ's response to Covid, we need strong leadership based on scientific research and unifying, clear and determined action. It may ~~seem~~ seem drastic at first, but is part of our best chance to reverse climate change. I urge you to take more extreme measures and become a leader in the world's response to this crisis.

I fully support this draft roadmap. It is critical that an MEDC such as NZ as a wealthy OECD contributes commensurately. It is wise & cheaper to take action now, rather than off-setting / out-sourcing this to future generations. You have the power & ability to lead ambitiously & regulate these initiatives. I am willing to play my part & support such actions <sup>to</sup> achieve 99% renewable energy. Public transport will need to drastically improve to achieve this target

I support the roadmap so far and am fully behind the changes that need to be made in our country for a more sustainable future. It is really important to me and my whānau that there is a just transition where NZ plays its part and is a good global neighbour to countries that are at the forefront of the climate crisis. I am very willing to play my part and I support bold action.

#### Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
  - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. ## Our first big issue - the pace of change

### 1. Do you agree that the emissions budgets we have proposed would put Aotearoa on course to meet the 2050 emissions targets?

(circle one) Strongly agree / Agree / Neutral / Disagree / Strongly disagree / Don't know

Please explain your answer (1000 word limit):

It <sup>But...</sup> would involve much persuasion and discussion. It would involve regulations and brave political decision. It would need to involve anger management practices with unbelieving individuals. This behaviour is heard on talk-back radio and in media. I am not neutral about the pace of change, but feel that well-resourced and effective persuasion about this crucial need must be implemented.

Graphic diagrams presented at the meeting place I write from present urgent plausible explanation on the definite need to Save Aotearoa from polluting EMISSIONS

## Our third big issue - Aotearoa's contribution

### 3. Do you agree with the changes we have suggested to make Aotearoa's NDC compatible with the 1.5°C goal?

(circle one) Strongly agree / Agree / Neutral

/ Disagree – our changes are too ambitious

/ Disagree – our changes are not ambitious enough / Don't know

Please explain your answer (1000 word limit):

## Our fifth big issue - policy priorities to reduce emissions

### 5. What are the most urgent policy interventions needed to help meet our emissions budgets?

(circle all that apply)

Action to address barriers

Pricing to influence investments and choices

Investment to spur innovation and system transformation

None of them

Please explain your answer (1000 word limit):
