

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

I agree with having an emissions reduction plan - particularly in relation to transport, Heat, Industry and power, Forestry + waste.
I consider further consultation is required in respect to Agriculture.
I agree with focussing on growing new native forests
electric vehicles cannot save the planet but we can

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I am very supportive of any action to combat climate change. I think that it is very important to respond in whatever means is possible. The need is great and our response should be proportionate to that need.

The effects of climate change are not equally distributed and so there needs to be the protection of those most adversely affected. The cost of implementing such action should be borne by all but not necessarily distributed equally. Those that profit off climate harm should be responsible for compensating that.

There are many who are materially contributing to climate harm but are not legally responsible because individually they have not created the harm. I believe that there is scope to make material contribution legally actionable.

I realise everyone will need to make changes to achieve the outcomes and I am willing to play my part and support bold action.

More ambitious action must be taken by the New Zealand government in order to combat climate change. International commitments have been made which need to be fulfilled immediately. IF action is not taken now, we, our wider global community, and our Pacific neighbours in particular will suffer the consequences. I am willing to do my part to combat climate change alongside all New Zealanders and other global citizens.

Action is needed not just words ~~the~~ time is fast moving out for the planet and future generations. I know some feel we in New Zealand make little difference given our low carbon / state but we all need to do our part especially given how much Brand N.Z. promotes us as a "green" paradise. We can afford to effect the necessary changes if the planet cannot afford it if change does not happen and soon. The inevitable short-term 'pain' will lead to long-term gain for all. Government needs to move swiftly + boldly + ~~make~~ ^{the} substantial + significant actions and show us it has done in the past that 'it is a country that leads'.

It is time for us to make changes.
We can sacrifice for the good of
all creation.

"I am not in charge of this House... I was
nowhere when God laid the foundations of
the earth... I am a guest here,
charged with serving other guests... As
long as I trust in one God who made us
all I cannot act as if they are no kin
to me. There is only one House. Human
beings will either learn to live in it
together or ~~and~~ we will not survive to
hear its sigh of relief when our
numbered days are done."

 An Altar in the world.

- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

Ideas to consider including in your response

- **I welcome this draft roadmap** from the Commission. To all involved - thank you.
- **I support more ambitious action** to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- **I support a just transition.** Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- **Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.**
- I realise that everyone is going to have to make changes to achieve the outcomes we need. **I am willing to play my part** and I support bold action.

Thank you for allowing us to make submissions on the Climate Change and the emission goals for the next 15 years reducing net emission by 36% over the next 15 years and suggest we could achieve even more by not only focusing on the emissions to build a more sustainable future:

- Investing in electric light rail in the big cities, Auckland, Wellington, Dunedin and Christchurch (as appropriate).
- Changing the farm pasture used for domestic animals to reduce the flatulence and improve the resilience of the pasture (i.e. allow the animals to eat more natural weeds, rather than grass, etc). This is likely to require education and support of farmers.
- Rewarding farmers who plant trees by providing the appropriate seedlings for their land to provide more shelter belts for the domestic animals and to encourage tree farms. Reforest the steep hills that are not appropriate used for pasture with native bush.
- Even more native forests planted to replace some of the damage done by our domestic farming practices.
- Support organic farming and healthy and humane animal farming practices (i.e. no caged birds, etc).
- Clean up our waterways.
- Improve recycling by supporting councils so that more plastics and glass can be recycled. Banning the use of plastic where possible and providing incentive for the use of recycled plastics in everyday life.
- Support research and development innovation activities to use recycled materials to find new ways to do things with Government Grants and tax credits.
- Support sustainable building practices. Encourage the building of simple and warm houses using recycled products for less cost.
- Support the building of sustainable and strong seawalls to protect existing housing and our shoreline from the encroaching seas effected by the warming of the seas causing hurricanes and other natural disasters.

I also request that the NZ Government also supports the push to reduce human population growth and therefore the human footprint and support biodiversity so that we maintain and support wild animals in their natural environments. I ask the Government to become a champion of maintaining and protecting all the species who inhabit our planet. In particular:

- Provide free contraception for young and vulnerable NZ women and educate them on their use in schools.
- Encourage a healthy lifestyle by encouraging the eating of less meat and reduce the impact of unhealthy foods such as sugar on our population.
- Encourage healthy activity.
- Focus Government aid overseas on providing education and free contraception in poorer countries. Education of women changes a society as they strive for a better life. Also provide education to the boys to give them a chance for change.
- Reduce the use of poisons and additives on crops grown for human consumption.
- Enforce fishing quotas and continue to support sustainable farming of fishes and other water creatures (i.e. muscle farms) for human consumption rather than taking them from the sea.
- Protect the NZ native birdlife. Provide more safe habitats free from predators.
- Become a world champion for all the species, such as insects, mammals, reptiles, birds, and their habitats. They are all needed to provide balance and biodiversity to this planet.

[UNCLASSIFIED]

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Thank you Climate Change
Commissioner for your efforts.
Here in church, we value the good work
you are doing to protect God's creation, we
prayed for you today.
I'm basically in favour of all your
recommendations - keep it up! I'm very
prepared to charge my lifestyle to limit
warming to under 1.5°C. I'm middle class
and can afford it. Please encourage taxation
of those most able to afford the charges, +
don't be swayed by naysayers.
God bless

I wholeheartedly support the Climate Change Commission's draft. New Zealand Aotearoa should do more than its fair share in environmental reform, as a world leader in being climate friendly. The target of reducing ~~emissions~~ emissions by 36% over 15 years ~~is~~ is a low bar and should be exceeded. I will support climate action by lowering the amount of landfill waste that my lifestyle produces and by increasing ~~my~~ my use of public transport and walking/cycling.

To the committee making considerations on the draft advice of the climate change commission, I am strongly in support of the roadmap legislation proposed by the climate change commission. Aotearoa is a Pacific nation, part of a community of nations which are already bearing the brunt of the effects of climate change. This is not a matter of political ideology, it is an urgent matter of humanity. Aotearoa must do more, sooner. The vehicle provided by the climate change commission is a strong chance at substantive, effective, and essential change required to mitigate the effects of an already very present climate change. The transition should be just, paid for by those who have resource to do so, while our most vulnerable are supported. Our natural environment, and collective human life is very much at stake. Humanity compels you to act on this boldly. Te Tiriti o Waitangi urges you to act boldly. The tamahiri yet to come, defend on your actions here. Time is running out.

I am fully in support of the actions the climate commission suggests and am looking forward to seeing New Zealand be a responsible global citizen. It is very important to me we do everything we can to reduce our emissions and combat climate change. I would also love to see New Zealand begin to look at more ways to increase our biodiversity and protecting our environment and native species. One way in which we could do this is to make 30% of our coast a no take zone, which will incur a multitude of benefits as well as helping us do our part in combating climate change.

- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

living space and must be cared for by all people. Our political leaders and Climate Commission need to lead us in the direction of greatly reduced carbon emissions. Therefore I support the recommendations put forward by the Climate Commission.

There is however one recommendation that I disagree with and that is the strong move towards battery vehicles. My opposition to this, is that we do not have the ability in NZ to recycle old batteries. If we have battery vehicles before we have battery recycling, we are likely to be swapping one problem for another. That is pollution from old batteries.

Thank you for your consideration of this input

Ideas to consider including in your response

- **I welcome this draft roadmap** from the Commission. To all involved - thank you.
- **I support more ambitious action** to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- **I support a just transition.** Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- **Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.**
- I realise that everyone is going to have to make changes to achieve the outcomes we need. **I am willing to play my part** and I support bold action.

- I Acknowledge the need! and agree with the intention.
- The need for transition pathways will be urgent.
- For full uptake of electricity as the ^{predominant} ~~main~~ source of heating, and cooking, knowledge to allow home supply and maintenance is vital. To rectify the lack of a depth of knowledge of supply and care of infrastructure in the community is vital.
- Supply of materials to enable the transition will be as vital as the supply of vaccines are to health.
- Support for local small business and the need for a full domestic economy is part of the answer.
- The new national needs good P.R.
- The dispossessed need hope.
