

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

Talofa lava. I am a Samoan individual, born in NZ, & I believe New Zealand needs to do more, sooner. My island is sinking. My island cries as the home of my ancestors experiences the consequences of climate change. I ask that you would please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.

Ideas to consider including in your response

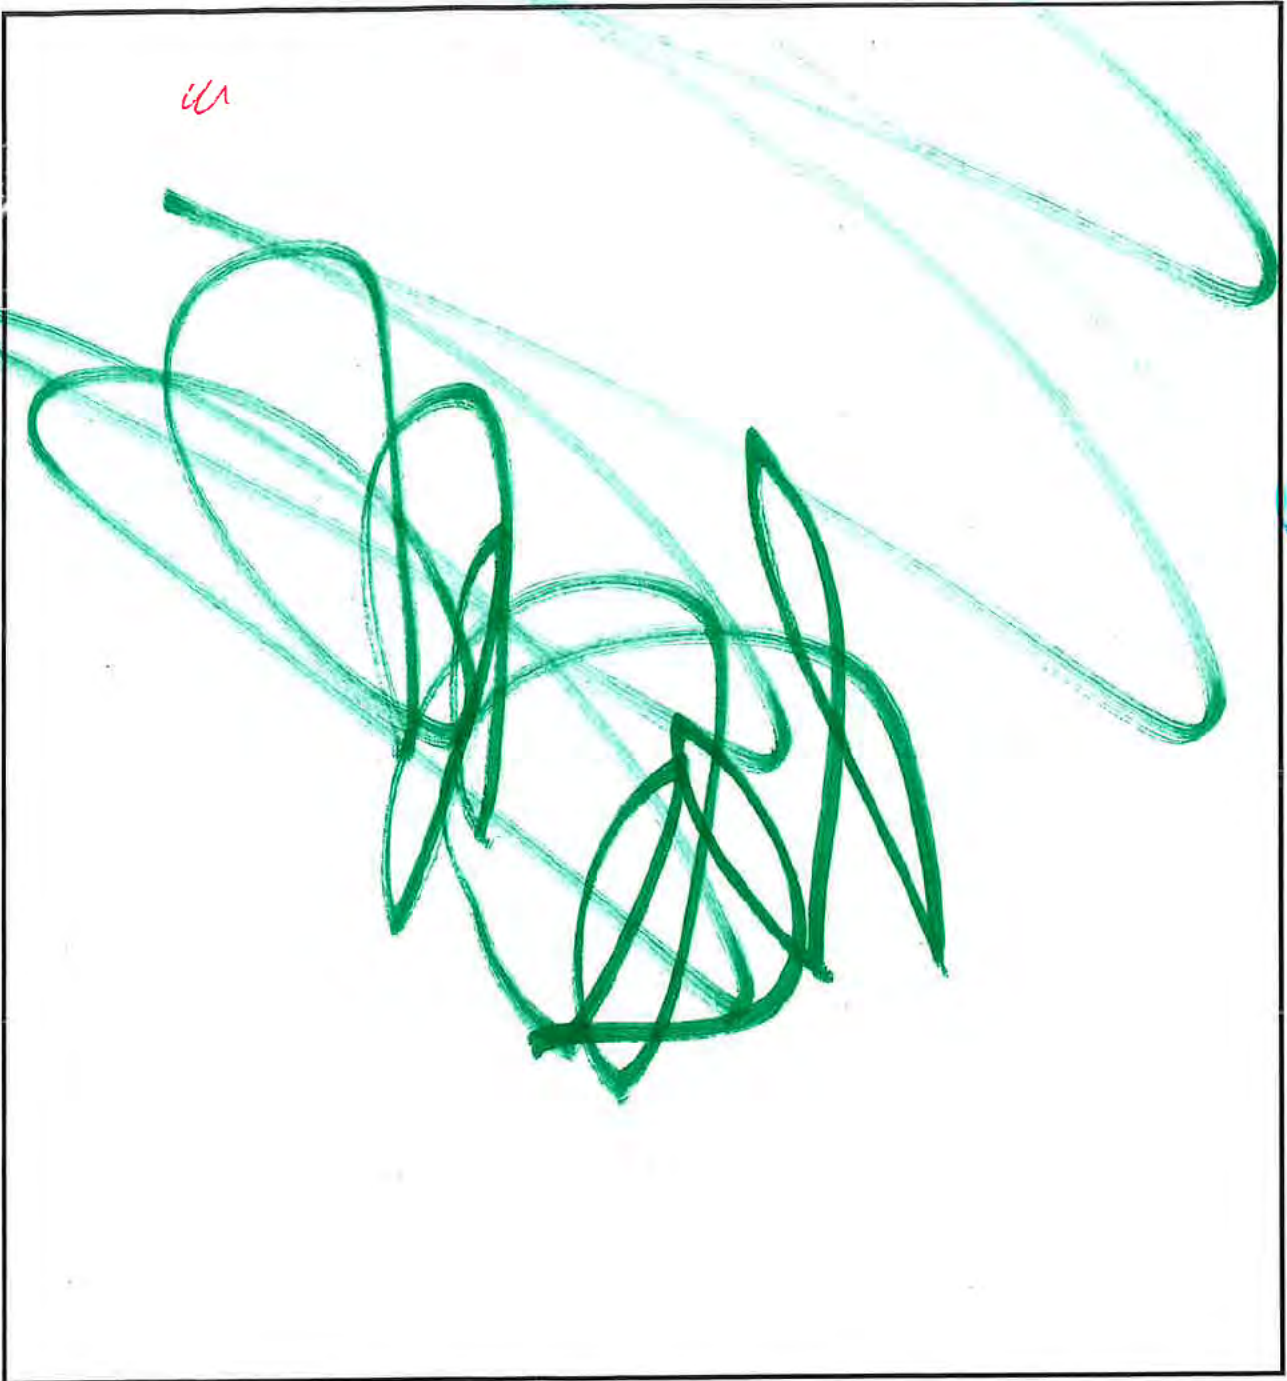

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

Kia ora, my name is [REDACTED] _____.

In 15 years from now, I will be 17 years old.

I am concerned about the future of our world, our common home in which we share life with all things. I know we can do more for our global neighbours and future generations by taking ambitious action at home in Aotearoa.

I hope in 15 years time, Aotearoa NZ will look like (draw a picture below):

Please consider kids like me and, our future when you finalise your report!

I support the proposals as outlined.
However we need to do a lot more
such as subsidising electric cars
(to lower the cost)
More public transport.
More recycling / prevention of waste.
Subsidies for installing solar
power in
homes.

Kia ora koutou,

I think the draft has a lot of great suggestions thus far but I would love to see more ambitious targets particularly in the various other modes of transport - realistically our current levels of walking, cycling & public transport up take is incredibly low in comparison to the rest of the world and it will require incredible investment & direct change to see people really make the changes required for now & future generations.

Ngā mihi nui.

Work as a united NZ ~~govt~~ government to work with local governments ^{regional authorities} to ensure infrastructure & incentives are in place to assist the population of NZ to incorporate climate focused initiatives in their daily way of living. To support science initiatives to provide more green alternatives to our current fossil fuel ^{whiteknit use of resources} support the draft roadmap.

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair t

Have your say on the Climate Commission's Draft Advice

This year the New Zealand government will set emissions-reduction goals for the next 15 years and begin work towards these goals.

On 1 February, the Climate Change Commission issued draft advice to the government on what goals they should set and what policy changes they should prioritise. They recommend reducing net emissions by 36% over the next 15 years, with a range of measures including:

- Banning the import of internal-combustion engine light vehicles by 2035
- Increasing the proportion of travel by walking (25%), cycling (90%) and public transport (120%)
- Achieving 99% renewable energy
- No new installations of gas and coal heating
- Diverting organics from landfill
- Reducing sheep and cow numbers by 15%
- A huge tree planting programme, including 25,000 hectares of native forests annually.

The Commission is seeking public feedback on its advice.

Anglicans across our region will make our voices heard.

Following the huge success of Anglican Movement in previous campaigns calling for bold and necessary action, we are collectively making our voice heard again.

Post this form to Kate Day at the Anglican Centre, 18 Eccleston Hill, Wellington OR email a photo of it to kate@anglicanmovement.nz before 22 March 2021. We will pass on all responses we receive to the Climate Change Commission. To make a more detailed response, visit: haveyoursay.climatecommission.govt.nz

I support the transitions proposed to reduce carbon emissions by 36% by 2035. (or sooner)
Any measures to be implemented must be sustainable, and fair over our population base so that particular sectors or groups of our society are not carrying all the burden of cost/inconvenience.

Incentives must be included to encourage buy-in from our society to support and take up the measures
e.g. - very cheap public transport.
- work from home
- ~~EU~~ EU subsidies

Ideas to consider including in your response

- I welcome this draft roadmap from the Commission. To all involved - thank you.
- I support more ambitious action to be fair to other countries and future generations.
 - New Zealand needs to do more, sooner. We are a highly developed nation and can afford the changes required. We have contributed more emissions per capita than many other countries, so our response should be commensurate. Delaying action shifts the burden to future generations and that is not fair. Further, we should not achieve our goals by paying other countries to plant trees for us. We need to reduce emissions here instead.
- I support a just transition. Those who can most afford to pay for the transition should bear most of the expense. Those that are most vulnerable in this transition need to be supported. As a society we need to look out for individuals, communities and businesses that are most affected and support them in the transition to a low carbon economy.
- Please ensure that all New Zealand's commitments are consistent with doing our bit to keep warming within 1.5 degrees.
- I realise that everyone is going to have to make changes to achieve the outcomes we need. I am willing to play my part and I support bold action.

I support reducing our carbon emissions by 36% by 2035, sooner if feasible

Sustainable measures must be implemented and they must be fair and just for all members of our society

It would help if incentives to adopt the measures ~~were~~ included, and perhaps some disincentives for using things that don't help reduce carbon emissions (eg petrol cars)

Ideas to consider including in your response

14-3-2021

I support all the submissions being made below especially (+ above) especially the limiting of the importation of petrol driven light vehicles within fifteen years. NZ is becoming a dumping ground for vehicles not permitted or encouraged in other countries so we need to cut down their importation as from now.

- Also we, as a nation, need to put into practice a realistic & economic system of providing solar power to every ~~household~~ ^{region} here. If the UK can support viable solar power farms (& wind farms) how much more can NZ do the same.

It is important that NZ contributes by taking responsibility for its own emissions no matter how small it is as a percentage of the world and any discomfort that arises from this must be accepted for the future of the planet and our children and grandchildren and all future generations.

I realise change is inevitable and we must all do our bit to support this. In changing we must make sure it is achievable to everyone and fair and just.

I support a just transition where the transition is based on what is affordable to who so we are not putting people to disadvantage.

I am willing to play my part to support this change, both in my household and my work environment.
